

Malik Muhammad Abdullah Younas

Full Stack Developer | Game Developer | Software Engineer

Islamabad, Pakistan • abdullahyounas0805@gmail.com • [GitHub](#) • [Portfolio](#) • [LinkedIn](#)

Summary

Just a coder who loves to build and break things. Can usually be found talking to my laptop or debugging code. I make everything from quirky games to useful web apps, and sometimes, I create projects just to see if I can. Been at it since I was 10, but really started taking things seriously around 17. Now, I'm all about pushing boundaries with game development in Unreal Engine and building slick web apps with React and Firebase.

Hi, I'm Abdullah, a 19-year-old Computer Science student from Pakistan. I'm passionate about creating interactive worlds and tools that make life a little more interesting. Whether it's developing a new game mechanic or polishing a website feature, I'm always eager to dive in and level up my skills.

Projects

- Smochat — [React, Firebase, Firestore]

A real-time chat application with Google authentication. Users can sign in, send messages, and stay updated in real-time. Focused on fast, clean UI.

- Whispern — [React, Firebase, Firestore, Ad Integration]

A minimalist micro-note platform where users can write and publish short notes (under 100 words), anonymously or with their name. Features include public/private posting, dedications, and ad-based post unlocking. No login required to read notes—built for open expression with privacy-first design.

- Sencdec — [Java, File Encryption/Decryption]

A desktop app that encrypts and decrypts text, images, audio, and video files into/from .txt format. Highlights secure handling and multi-format file processing.

- Boardify — [React, CSS]

Boardify is an image upload site where you can upload and download images you share or those shared by other users.

- Keyboard Cowboys — [Unreal Engine 4, Blueprint/C++]

A fast-paced typing speed test game where each word you type fires a bullet as visual feedback. Players race to type words quickly and accurately to climb the top 10 leaderboard. Combines typing mechanics with satisfying VFX to make speed testing fun and competitive.

- Haze — [Unreal Engine 4, Blueprint]

Haze is a unique FPS maze escape game where you can only move forward using the **W key** and steer with your mouse. Players must escape a complex maze while being chased by swarms of bees that spawn from portals. The longer you take, the more chaotic the maze becomes, with a timer counting up to track your run.

- Wooshy — [Unreal Engine 4]

Wooshy is a small prototype designed to showcase flying arcade physics. Players use momentum to continue flying within a small, confined room-level environment. The game emphasizes fluid control and smooth movement, offering a fun and dynamic flying experience.

- RIP (Prototype) — [In Development]

RIP is a small racing game prototype currently in development. Players will race on a single track, featuring high-speed jumps, drifts, and crashes. The game will allow players to race against other players' ghost data, competing for the best time at different points along the track.

Skills

Languages: Java, JavaScript, C++, Python

Frameworks/Libraries: React.js, Node.js, Firebase, Unreal Engine (Blueprints)

Tools: Git, GitHub, VS Code, IntelliJ, Unreal Engine, Figma

Other: Game Design, UI/UX, REST APIs, Authentication, File I/O, Encryption

Education

BS in Computer Science — Iqra University 2024–2027

Achievements

Keyboard Cowboys became a hit among classmates and friends, praised for its fast-paced gameplay and fun visual effects. Sparked friendly competition in school labs and student circles.

Smochat was widely used by students for casual conversations, demonstrating the app's reliability and appeal in real-world usage.

Sencdec helped users securely encrypt and decrypt files before sharing them, ensuring privacy in school and peer-to-peer communications.

Freelance Game Tester on *OpenSeason* (Epic Games) — provided critical feedback on game mechanics, bug testing, and player experience during its early development phase.

Email Subscription Task on Upwork — successfully managed large-scale account creation and service subscriptions with accuracy and detailed reporting.

Freelance Work

Game Tester – OpenSeason (Epic Games)

Upwork / 2024

- Tested early development builds for gameplay bugs, performance issues, and UX consistency.
- Provided detailed feedback to the developers on balance, difficulty, and user experience.
- Collaborated with the dev team to verify bug fixes across builds.

Email Creation & Subscription Assistant

Upwork / 2024

- Created and managed multiple email accounts as part of a service campaign.
- Subscribed to various online services, ensuring successful sign-ups and report tracking.
- Maintained spreadsheets to log progress, service feedback, and account status.
